

INTERCEPT

The AI Shield Against Phone Fraud.
Stopping scams exactly at the point of attack.

The Cost of a Phone Call

Every day, vulnerable individuals lose their life savings to "Digital Arrests" and tech-support scams.

The manipulation is entirely psychological. Scammers bypass rigid digital banking security by socially engineering the victim directly.

By the time a victim realizes they've been manipulated, the wire transfer is executed and the funds are unrecoverable.

Existing Solutions Are Broken

Caller ID & Blockers

Standard apps only flag known, reported spam numbers. They are completely useless against modern caller ID spoofing and rotating VoIP numbers used by organized scam syndicates.

Bank Fraud Alerts

Bank alerts are reactive, not proactive. They typically trigger at the final stage—when the victim is already psychologically compromised and actively authorizing the fraudulent transfer.

The Solution:

INTERCEPT

Real-Time AI Intervention

Intercept is a passive, autonomous listening shield. It does not rely on outdated blacklists or phone metadata.

Instead, it continuously analyzes the psychological **intent** of the conversation, neutralizing the threat before the financial transaction is ever initiated.

Key Capabilities

Real-Time Detection

Actively listens to the live conversation, instantly identifying psychological pressure, tech scams, and police impersonation tactics.

Zero-Latency Analysis

In-memory processing guarantees immediate verification of threat signatures, ensuring no degradation in call quality.

Auto Intervention

The system autonomously triggers a visual UI lockdown and blocks the call the moment the AI risk score exceeds 85%.

Tech Stack & Architecture

Frontend: Next.js & Framer Motion

A responsive Glassmorphism UI that captures device audio in rapid 3-second chunks, optimizing for speed and low-latency transfer.

Backend: FastAPI & WebSockets

A high-throughput Python backend sustaining continuous WebSocket streams (ws://stream) for incoming raw audio bytes.

Transcription: OpenAI Whisper-1

Deployed for near-instant, in-memory speech-to-text conversion of the audio chunks as they arrive.

Intent Analysis: OpenAI GPT-4o

Executes a constrained zero-latency psychological intent analysis, returning a deterministic JSON risk score to the UI.

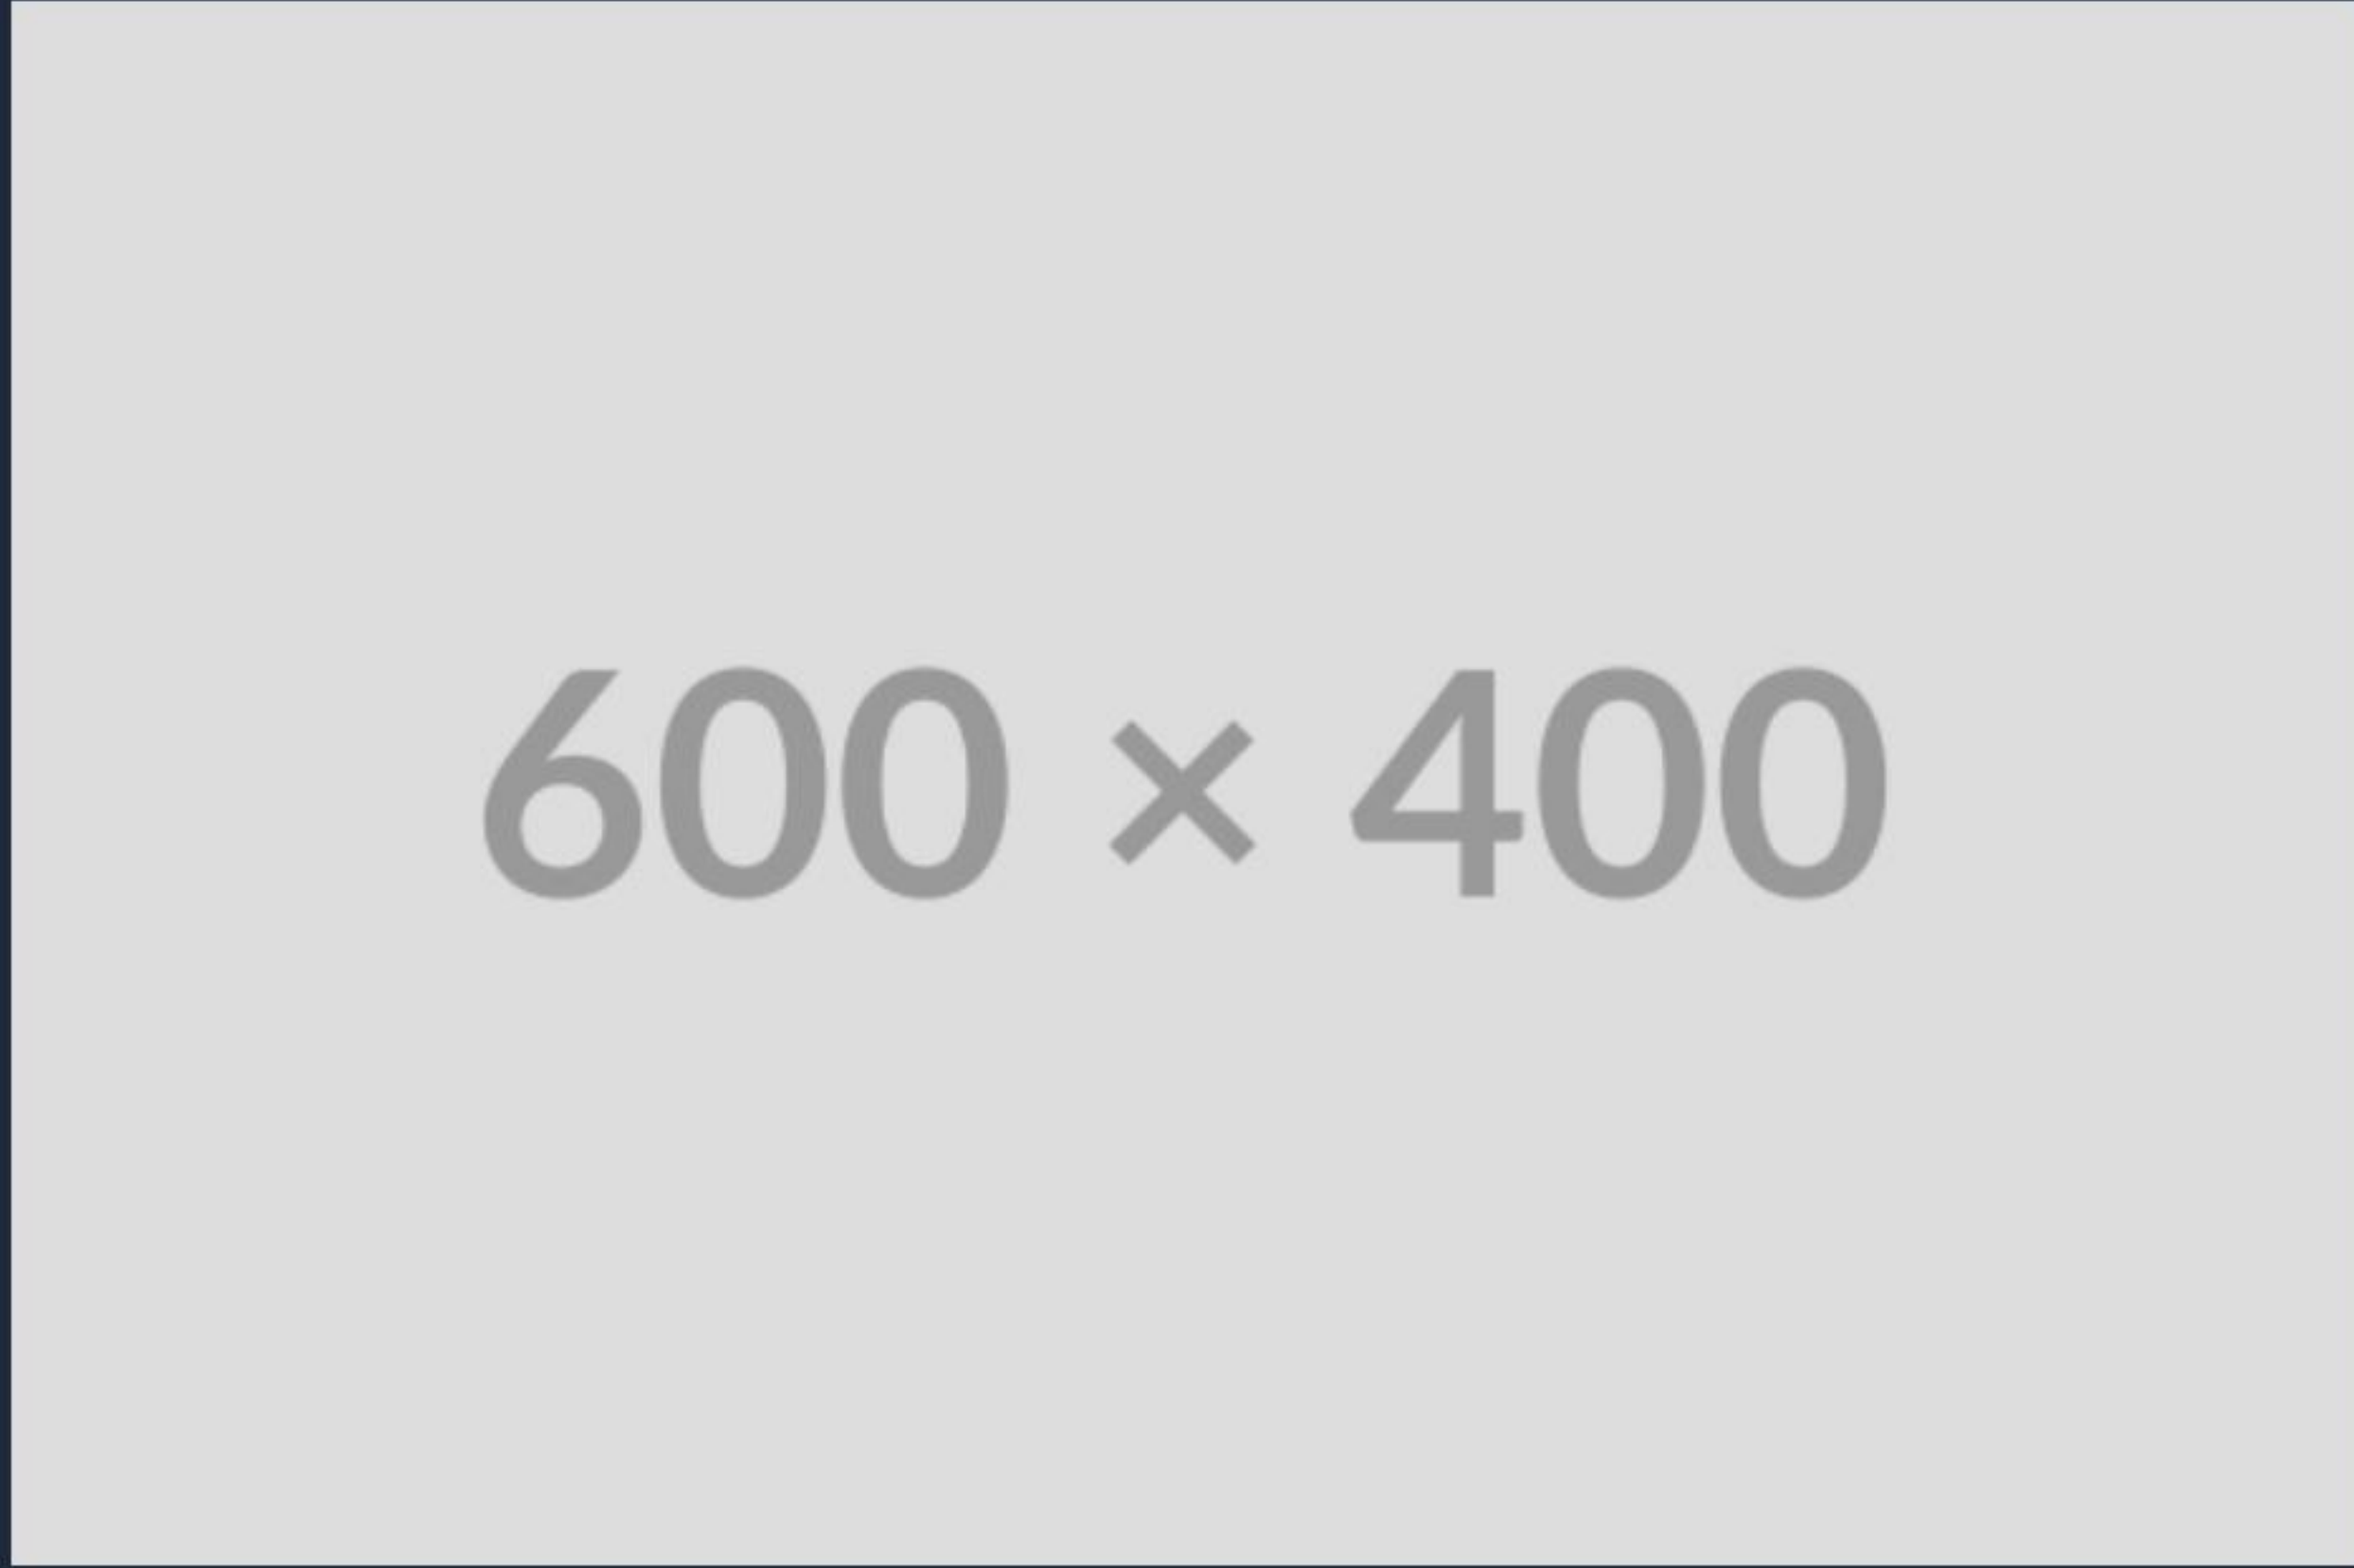

Live Demo: Safe vs. Scam

600 × 400

Baseline State

Passive listening with a low risk score. Zero interference with the user's call.

600 × 400

Intervention Triggered

Risk Score > 85% triggers immediate UI lockdown, halting the attack vector.

USP & Market Model

0ms

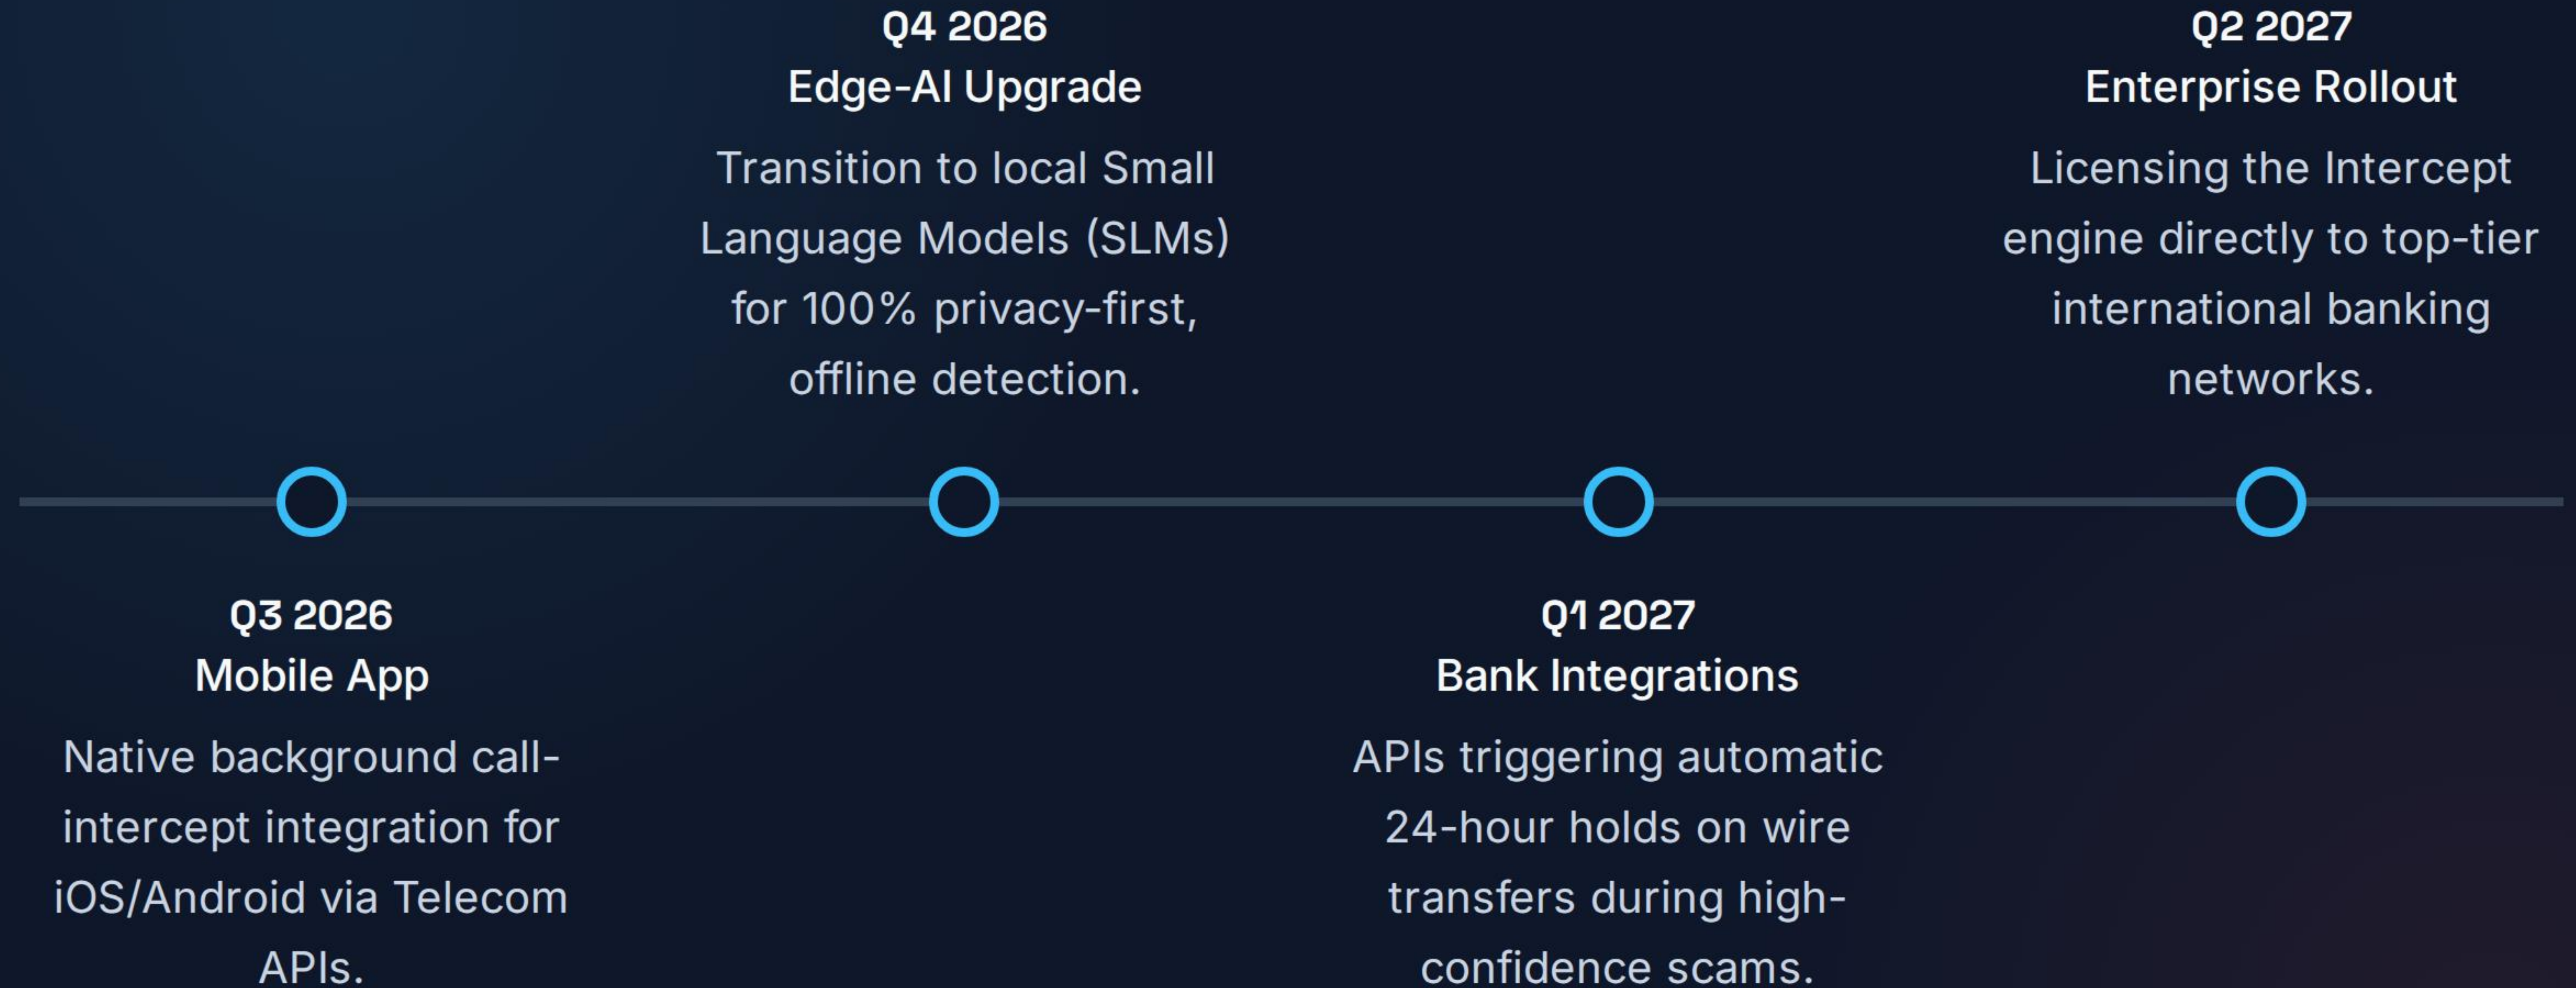

Intent Analysis Latency

Intent, Not Metadata

Our unique selling proposition is capturing the conversational reality. Scammers can fake a phone number, but they cannot fake their psychological intent.

B2B2C Integration: Designed as an API infrastructure layer. We empower telecom providers and banking apps to actively protect their most vulnerable customer segments.

Future Roadmap

Thank You

Intercept: Stop the scam. Save the savings.
